Vector Frame Kit 07

VF-K-07
Stand apart from the competition with a clean, sophisticated 10’ x 10’ or 10’ x 20’ Vector Frame™ exhibit kit. These graphic mural kits feature square-corner 50mm extrusion frames and push-fit fabric graphics that cover the entire frame. Vector Frame Essential kits are easy to assemble and disassemble.

features and benefits:
- 50mm silver extrusion frame
- Single-sided SEG dye-sublimated push-fit fabric graphics
- Easy step-by-step instructions
- Kit includes frame, five fabric graphics, six 120 watt lights, two wheeled molded case
- Lifetime hardware warranty against manufacturer defects

Connection Methods

Extrusion based structures use a number of different yet simple connection methods. Your kit will include one or more of the connection methods shown below. Steps within the Kit Assembly will reference a specific method for each connection point.

**Connection Method 1:** Cam Lock / Slide Lock

A cam lock equipped extrusion can lock to any cam lock channel. With the cam lock unlocked, set the teeth of the cam lock into the desired position on the cam lock channel. Using your allen key tool, carefully turn the lock clockwise to lock in place. Be sure to lock securely, but do not overtighten.

A slide lock equipped extrusion can also lock into any cam lock channel. When the slide lock is unlocked, pull back on the hex bolt head to retract the slide lock into the body of the extrusion. Slide locking procedure is the same as a cam lock.

**Connection Method 2:** IB2 / Corner Brackets

Press the hex bolt head in with your thumb and slide the extrusion and connector together so that the hex bolt head sits into the lock hole. Repeat with the second extrusion to the free end of the connector. Lock the extrusions together by turning carefully with the allen key tool. Be sure to lock securely, but do not overtighten.

**Connection Method 3:** SW-FOOT

An SW-FOOT assembly consists of two thumb screws, an LN100, and SW-FOOT baseplate. Start by loosening the thumb screws (it is best not to completely remove the screws). Slide the extrusion onto the LN100 by utilizing its back cam channel. When the extrusion rests on baseplate or ground (depending on application), tighten the thumb screws to lock in place. Do not overtighten.
Kit Assembly
Step by Step

Step 1.
Assemble your frame using the Exploded View page for reference. Please reference Connection Methods 1 & 2 for more details.

Step 2.
Install your graphics. Push the silicone beading on the edges of your graphic into the channels of the PHFC2, as shown in the figure below.

Step 3.
Apply the spotlights to your kit. Using the appropriate included clip, slide the light into the top channels.
